

Smart Lockers for Inventory and Asset Management

**Visibility and management
of your most valued asset.**

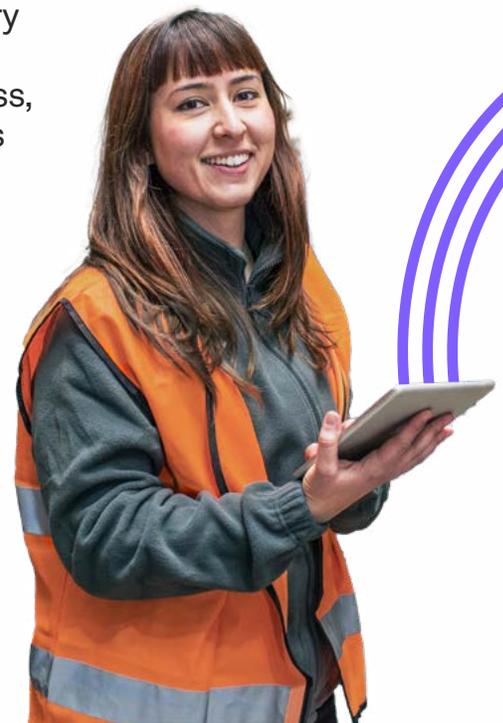

Inventory Management Lockers

Employees' daily usage of inventory, such as IT equipment or supply items, requires other staff members to be constantly available, often distracting them from more important work. Ricoh Smart Lockers can distribute inventory items at the point they're needed. This means reducing the cost of inefficient storage and interrupting other staff members, while still allowing access to any inventory, such as office supplies, IT peripherals, or even electronics such as laptops and mobile phones, which are securely stored.

With inventory lockers, you can intelligently track your inventory supplies without the need for RFID tags or rely on complex and time-consuming manual recording processes. With key-less, manageable access, tracking, and secured storage, your teams can save time, prevent losses, and optimize space usage.

Our Smart Lockers for Inventory Management improve accountability and governance across the organization with access and usage reports so you can maintain accurate records and interdepartmental cross-charging.

Asset Management Lockers

Asset management lockers can distribute assets at the location in which they are needed, quickly and efficiently. They make it easy to provide your workforce with secured, self-service options for retrieving or returning devices. For employees, it reduces the time spent procuring tools and equipment and for the business, it controls costs by minimizing losses, theft, damages and even delays. Our asset management lockers also provide individual compartment control for reusable electronic assets, devices, tools, and other valuable calibrated instruments.

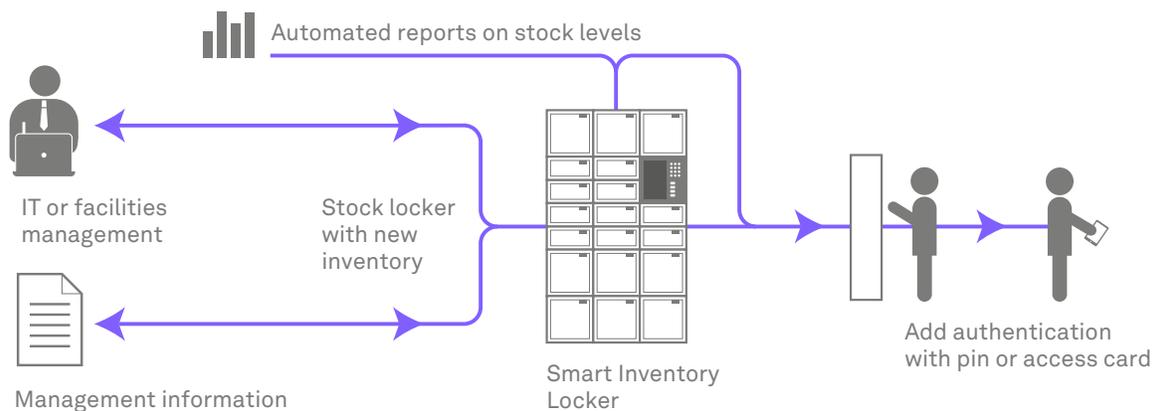

This system offers secured check-out and check-in, meaning you always know when an item was checked out or returned and by whom. Alerts can be created to set loan periods, and notifications set up for when items are overdue. Detailed tracking and reporting can bring insight and visibility into usage trends, device health patterns, and, of course, support accountability and corporate governance policies.

Our asset lockers come in many different configurations and can include power and data ports in each locker to keep electrical devices fully charged, connected, and ready to go while in storage.

Key benefits:

- Secured access and easy tracking of items prevent misuse and loss
- Clear doors and bright interior lighting for better product visibility
- Charging ports to keep electronic devices fully charged and ready for use
- Versatile configurations for customizing the height, door, and dispensing solution
- Integrates with existing incident/request service management system
- Supports a wide range of user ID access: bar code, magnetic stripe card, or keypad entry
