

RICOH InfoPrint Manager

Scalable Output Management

Take control and drive down
your total cost of operations

RICOH
imagine. change.

Reliable, secure, and centralized control for all your output management needs

Facing challenges with disparate and legacy systems, multiple print servers, locations with varied printing needs, and evolving datastreams? **RICOH InfoPrint Manager** is the scalable solution that provides centralized control of distributed printers from various manufacturers, and manages print jobs and queues across your network through a single web-based interface and a single print server.

- **Seamlessly integrates with Enterprise Resource Planning (ERP) systems** such as SAP® and Oracle® to simplify output management and centralize print job status
- Near-time status updates and call back functionality help ensure **higher productivity levels and reduces IT involvement by providing centralized control**
- **Offers encrypted printing and data** to ensure security-compliance and to protect documents from unauthorized access
- Provides visible and centralized control over printing jobs and queues, no matter the geographic location, to **drive down the cost of operations**

Take your business further with these **RICOH InfoPrint Manager integrations**

SAP® Certified Integration with SAP S/4 HANA®

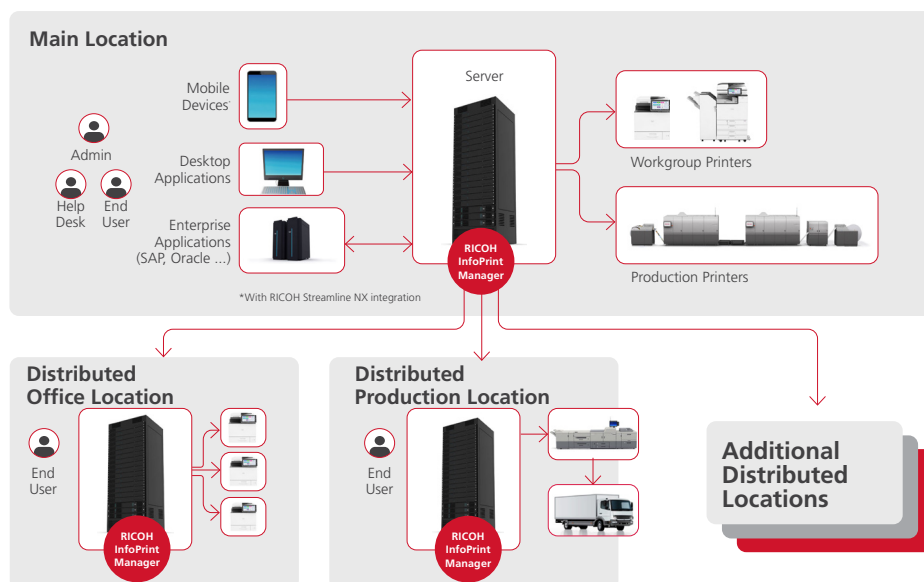

- Allows enterprise users to add functionality to their SAP investment and supports mixed printers, multiple data streams and operating systems
- Empowers your staff to view and manage jobs through one interface, including creating and configuring printers in SAP and linking them to RICOH InfoPrint Manager
- Easy implementation without current workflow interruption optimizes interoperability with SAP applications, and provides a robust print server helping to reduce overall IT costs

SAP® Certified
Integration with SAP S/4HANA®

RICOH Streamline NX

- Creates a scalable all-in-one solution with centralized print management for office and enterprise environments
- This integration allows users to securely retrieve their job by authenticating themselves, on-site or remotely, without having to identify a specific output device
- Jobs can originate and be delivered anywhere across an organization's network

Optimize your distributed office and production print environments

Scalable output management

Adapt to changing needs and scale efficiently with open architecture, multi-brand printer support, and easy configuration. Streamline your printing infrastructure by consolidating print servers.

Centralized management and control

Make more informed decisions with a complete picture of all print activity across your network through a single web interface. Relieve IT administrative burdens, reduce costs and boost asset utilization.

Intelligent document routing & scheduling

Increase operational efficiencies, meet critical deadlines and minimize human error. Achieve higher overall throughput and maximize productivity by balancing workloads.

Robust tracking, accounting and notifications

Achieve continuous process improvement and reduce costs with accounting functions that track and report on multiple job attributes.

Reliable automated data stream transformations

Reduce the errors and frustration from mixing new with legacy technologies and easily manage multiple file format conversions from several input and output data streams.

Flexible job submission methods

Accept jobs from various sources across your organization, regardless of the platform used and enable direct delivery from legacy print queues.
