RICOH TotalFlow BatchBuilder™

Automated Job Management

Be more profitable in your
short-run work

RICOH
imagine. change.

Simple, intuitive and **powerful.**

Give your business what it needs to create streamlined workflows that take the chaos out of managing a variety of small jobs from multiple sources. Increase operator efficiency, printer utilization and your business's profitability with RICOH TotalFlow BatchBuilder.

Flexibility that fits your workflows

BatchBuilder filters jobs based on production criteria and allows you to automate your scheduling based on priority. Tailor your schedule with filters, such as document size, paper type, finishing styles, deadlines, customer name and more — or use BatchBuilder's fully automated scheduling. Seamless integration with Ultimate Impostrip® gives you the agility to change things on the go and confidence in the integrity of what you're sending to print.

Job-level visibility through production

Thanks to an intuitive interface, jobs can be easily viewed and located at any point in the workflow. Barcodes make it simple for operators to update the status of work or resubmit an order. Easier oversight and faster tracking of an increasing volume of small jobs results in less employee stress and more satisfied clients.

Ease-of-use and control are fundamental elements of BatchBuilder's vendor-neutral design.

More profit, less stop-and-start

Be more efficient with BatchBuilder by removing manual touchpoints and reducing back-and-forth setups for print and finishing. BatchBuilder helps you recover valuable time, process more orders and price your work more competitively.
Keep operator focus where it needs to be

BatchBuilder uniquely performs batching work upstream so jobs arrive at the printer already sorted according to like characteristics, reducing manual processes and bottlenecks. BatchBuilder can automatically pre-flight, perform imposition and send a job where it needs to go. By mapping job ticket information to the printer, BatchBuilder boosts efficiency by eliminating the re-entry of information by operators.

Make the most of your sheet-fed, continuous feed and wide-format printers. Increase device throughput, regardless of manufacturer, with automated routing that organizes jobs by attributes for maximum efficiency.

RICOH TotalFlow BatchBuilder™
Specifications at a Glance

BatchBuilder is compatible with most standard operating systems and hardware. Check with your sales representative to determine compatibility with your specific hardware and software environment.

System Requirements:	- Processor: Quad-core 2.7 GHz or higher (64–bit) - RAM: 8 GB recommended (4 GB minimum required) - Disk Space: Recommended minimum of 500 GB, using 250 GB for the initial installation and an additional minimum of 250 GB, depending on usage.
